This screenshot shows the Empathy messaging application's configuration interface. A central window titled 'Messaging and VoIP Accounts' displays a single account entry for 'nealewillis on Canonical'. The account status is shown as 'Available' with a green speech bubble icon. Below the account name is a blue '#' symbol icon. To the right of the icon, the text 'nealewillis on Canonical' is followed by a small blue gear icon and the status 'Connecting...'. A red 'ON' button with a switch is also present. A yellow banner at the bottom of the window reads 'Go online to edit your personal information.' At the bottom of the main window are two buttons: a '+' and '-' sign for adding or removing accounts, and 'Edit Connection Parameters...' and 'Close' buttons. On the far left, a sidebar titled 'Contact List' is visible. The entire interface is set against a dark orange background.

This screenshot shows the Empathy Internet Messaging application running on a Linux desktop. The main window displays a 'Contact List' and 'Messaging and VoIP Accounts' interface. A central 'Network' configuration dialog is open, showing settings for the 'Canonical' network, including the character set as 'Unicode (UTF-8)' and a list of servers with 'irc.canonical.com' as the active entry. To the right, a 'People nearby' section indicates the account is currently offline. A sidebar on the left lists various desktop applications like the Dash, Home, and Dash to Dock. A bottom dock contains icons for the Dash, Home, and Dash to Dock.

Mumble -- 1.2.3-2ubuntu4

[09:45:13] Welcome to Mumble.

**Audio Tuning Wizard**

**Volume tuning**  
Tuning microphone hardware volume to optimal settings.

Open your sound control panel and go to the recording settings. Make sure the microphone is selected as active input with maximum recording volume. If there's an option to enable a "Microphone boost" make sure it's checked.

Speak loudly, as when you are annoyed or excited. Decrease the volume in the sound control panel until the bar below stays as high as possible in the blue and green but **not** the red zone while you speak.

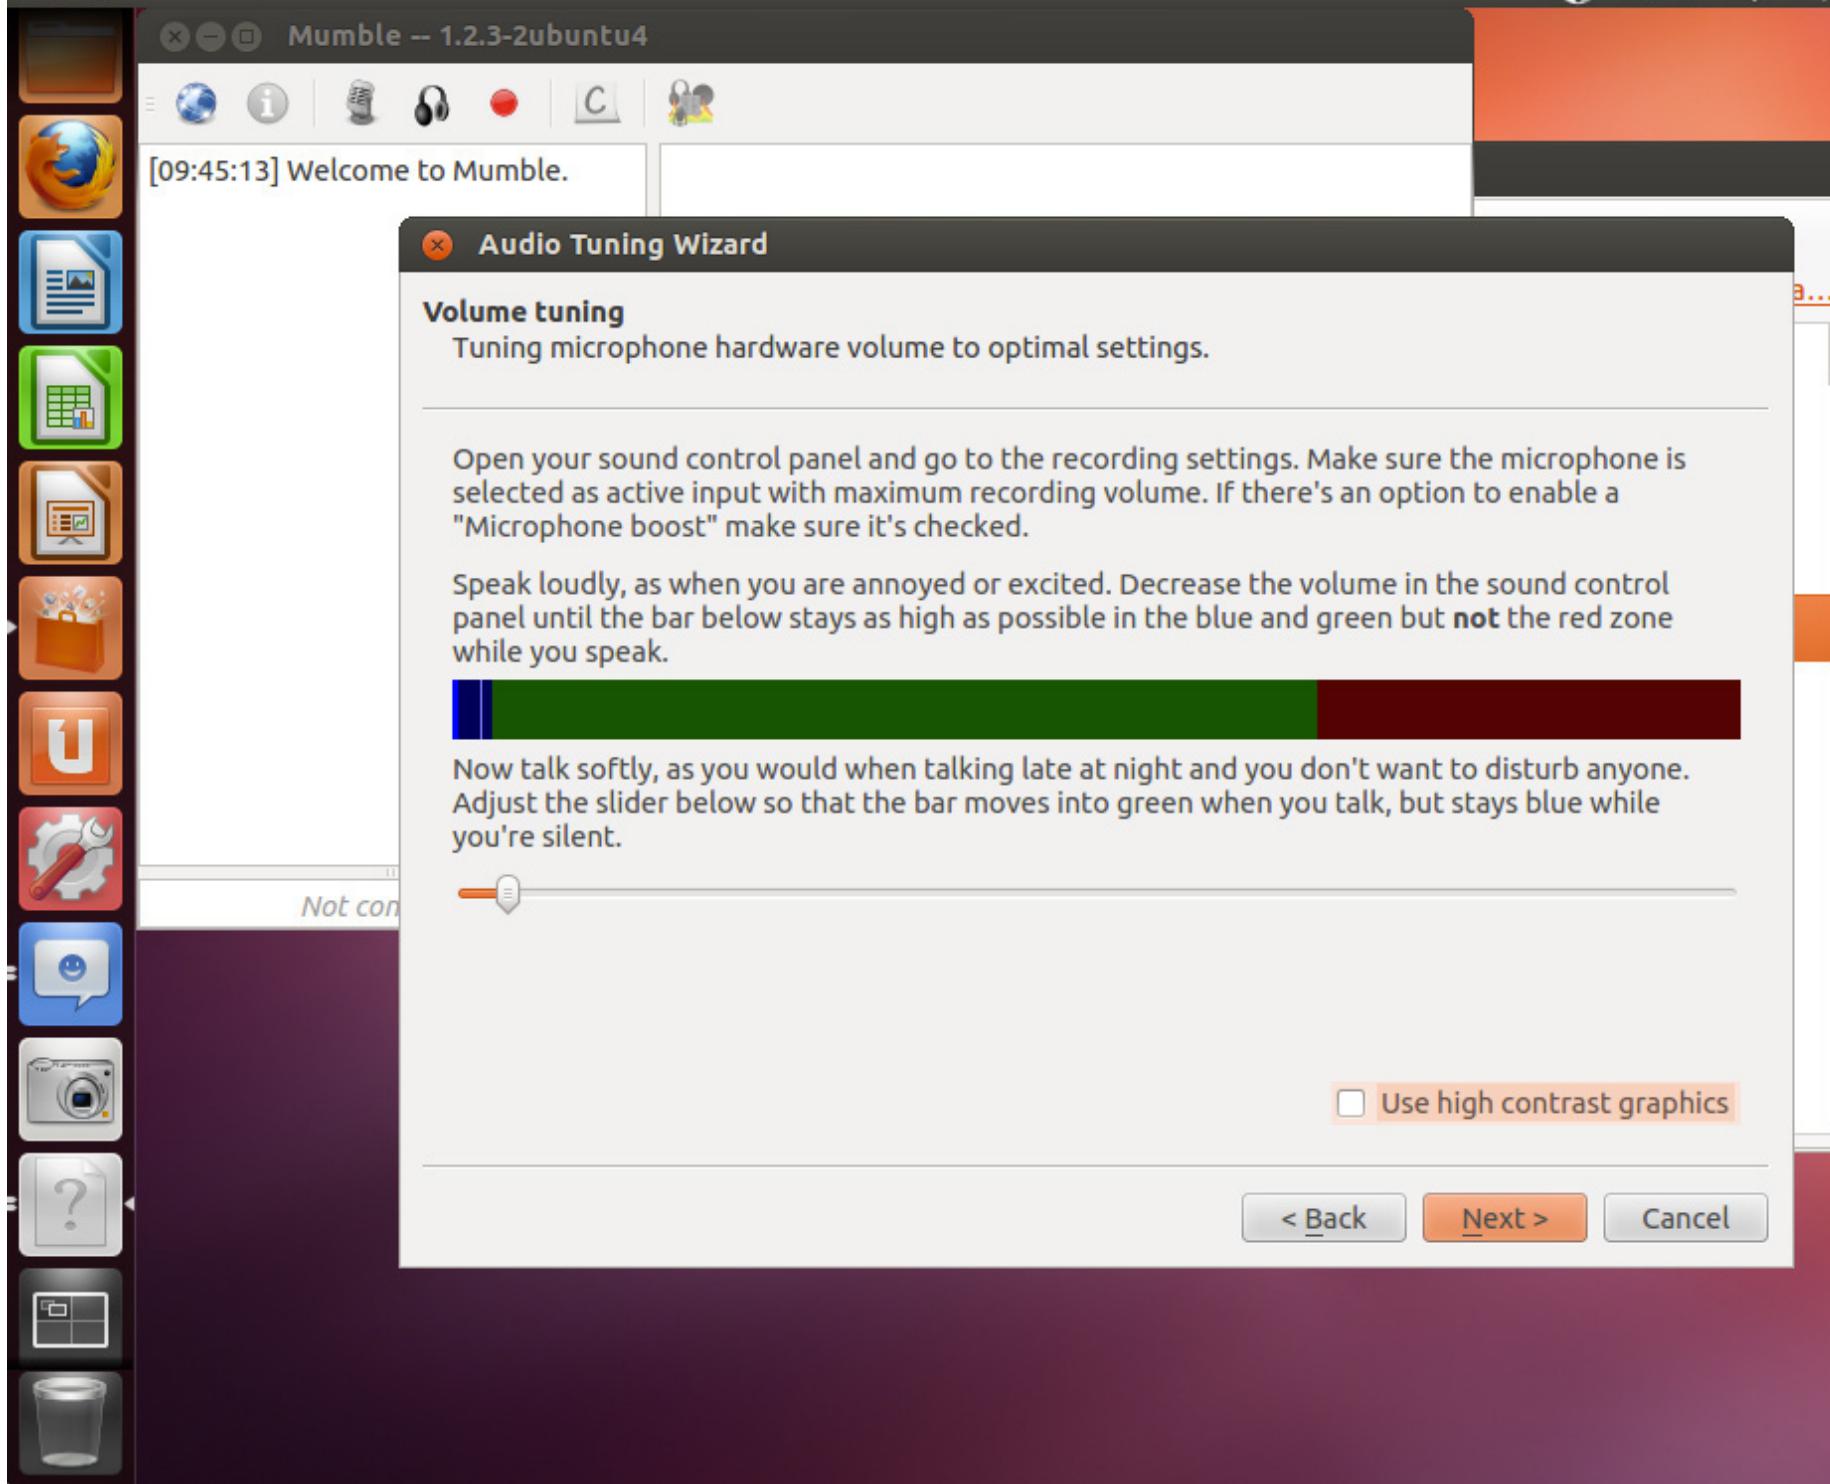

Now talk softly, as you would when talking late at night and you don't want to disturb anyone. Adjust the slider below so that the bar moves into green when you talk, but stays blue while you're silent.

Use high contrast graphics

## Certificate Management

### Certificate Authentication

Authenticating to servers without using passwords

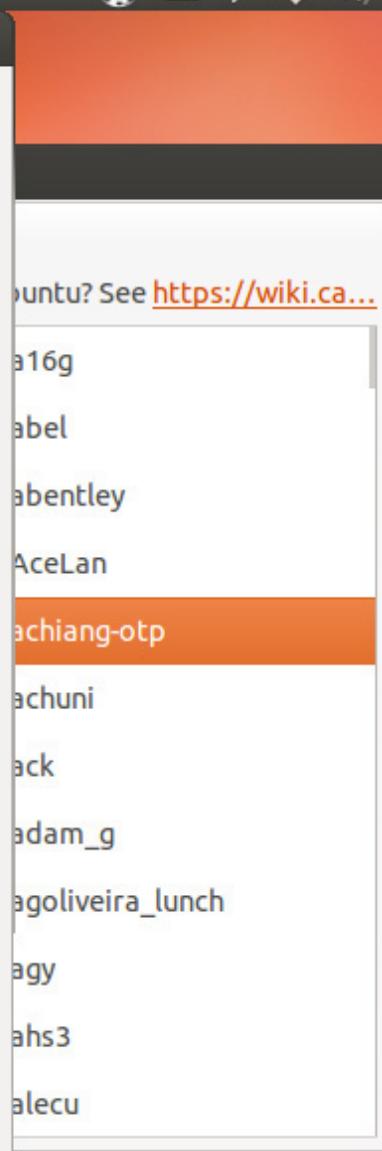

Mumble can use certificates to authenticate with servers. Using certificates avoids passwords, meaning you don't need to disclose any password to the remote site. It also enables very easy user registration.

While Mumble can work without certificates, the majority of servers will expect you to have one.

It is **strongly recommended** that you [create a trusted certificate](#).

-  Automatic certificate creation
-  Create a new certificate
-  Import a certificate
-  Export current certificate

The image shows the Ubuntu desktop environment's login screen. It features a light gray background with a dark gray footer bar. At the top center is a purple gradient desktop icon. Below it, the word "ubuntu" is written in a lowercase sans-serif font. A user profile card is displayed, showing a small yellow placeholder icon for a photo, followed by the name "Neale". Below the card is a text input field labeled "Password:" with a single character typed in. At the bottom left is a dropdown menu set to "Ubuntu" with a downward arrow. To its right are two buttons: "Cancel" in a light gray box and "Login" in an orange box.
